Senior JavaScript Developer

I'm confident with

- Leading sprint teams
- Sharing knowledge
- Effectively managing time
- TypeScript
- JavaScript
- React
- Groovy
- Docker
- Automated testing
- CI / CD Pipelines

I have experience with

- Project Management
- Java
- C#
- WASM
- Ansible
- AWS

I'm exploring

- Rust
- Terraform
- React Native
- Flutter
- Dart

I'm a senior developer with 5 years' experience delivering high quality software and building productive and healthy teams. I love to learn, face up to new problems, and help those around me grow. I thrive in an environment of alignment and trust - where I can be proud of my work and the output of the organisation as a whole.

Cambridge Cognition / Senior JavaScript Developer
JUNE 2019 - PRESENT

Moving into a senior role, I took on a leadership position within our sprint team; leading technical implementation, project planning, and requirement gathering on product enhancements and customer solutions. I took responsibility for ensuring that we delivered high quality solutions to customer deadlines and helped to balance work so team members had the ability to grow and gain experience with different areas of the stack.

Cambridge Cognition / JavaScript Developer
MARCH 2018 - JUNE 2019

As part of a small sprint team I worked across the stack on a number of product enhancements and customer projects. Applying my JavaScript knowledge I helped my team develop new microservices and move our frontend architecture forwards. Gaining additional devops experience, I undertook key improvements to our production stack and automated testing pipeline.

1Spatial / UI Developer
NOVEMBER 2016 - MARCH 2018

As UI Developer I was responsible for the frontend design, development and implementation of new solutions and products. I worked with product managers and backend developers to fix bugs and implement new features within 1Spatial's existing product suite.

Victoria Forms / eForms Consultant
NOVEMBER 2014 - NOVEMBER 2016

My role incorporated a range of responsibilities, from customer relations and project management, to product testing and front-end development.

Queen Mary, University of London / BA (Hons) History - First Class
SEPTEMBER 2011 - JULY 2014

The most important skill I developed during my degree was the ability to digest a large amount of information quickly and condense and analyse the key points.
